

## **Introduction to JSC Company**

JSC Corporation is a South Korean company specializing in the export of breakers.

Our production is carried out by our parent company, Jisung Heavy Industries.

Since the spin-off from Jisung Heavy Industries approximately 15 years ago, we have been exporting breakers to over 30 countries, including the United States, Canada, Europe, and have established distributors and partners in each country.

Starting from May 2022, we have been preparing for a breaker partnership with Volvo Region Asia, and as of January 2023, we have launched the V-series Breaker and are currently collaborating.

Our breaker production capacity is approximately 300 units per month and 4,000 units per year. Our delivery time is around 5 weeks after receiving an order, and for domestic customers, especially for key models (4-ton and 14-ton), we maintain inventory plans to meet customers' urgent delivery demands.

The advantages of the V-series Breaker can be summarized in the following four points:

- Competitive pricing
- Short delivery times
- Stable quality
- A wide range of models (3 types, 45 models)

Key customers in the domestic market include excavator rental companies, civil engineering and real estate development companies, and mining companies. We mainly sell Side Type breakers in the domestic market.

For larger equipment in the domestic market, the purchase decision is influenced by superior product impact, quick after-sales service, reasonable prices, payment terms, and prompt supply of spare parts. The domestic market is a challenging one as it requires breakers with even greater impact power due to very hard rock conditions, making it more demanding than overseas markets.
